TEXAS STAAR

GRADE 8

Reading Language Arts & Mathematics

All-in-One Study & Practice Guide

8 Full-Length Practice Tests · Complete Skill Review · Deep Answer Explanations

Short & Extended Constructed Response Mastery · Score Diagnostics

100% aligned to the Texas Essential Knowledge and Skills (TEKS)

2027 EDITION

First printing, 2026. Printed in the United States of America.
Interior: 8.5" × 11", black & white.

Important Notice — Trademark & Independence

STAAR® and the **State of Texas Assessments of Academic Readiness** are registered trademarks of the **Texas Education Agency (TEA)**. **TEKS** refers to the Texas Essential Knowledge and Skills.

This book is an **independent study guide**. It is **not affiliated with, authorized by, sponsored by, or endorsed by the Texas Education Agency** or any other Texas state agency. All references to STAAR and the TEKS are made solely for identification and educational alignment purposes.

All passages, questions, graphics, and practice materials in this book are **original works** created for instructional practice. They are designed to reflect the style, format, difficulty, and standards coverage of the STAAR Grade 8 assessment; they are **not** actual test questions and are **not** reproduced from any secure or released state testing material.

About This Edition

This 2027 Edition reflects the STAAR program **as of November 5, 2026**, including the online test format and the current question types, scoring, and TEKS blueprint. Under Texas House Bill 8 (2025), **spring 2027 is the final STAAR administration** for grades 3–8; a new assessment, the Student Success Tool, is scheduled to replace STAAR beginning in the 2027–2028 school year. This book is built to prepare students thoroughly for that final STAAR year.

While every effort has been made to ensure accuracy, test specifications can change. Families and educators should confirm current details on the official Texas Education Agency website.

Getting Started

How to Use This Book

Inside the STAAR Grade 8 Test — The Final STAAR Year

How STAAR Is Scored

Item-Type Field Guide (How Online Questions Look on Paper)

Your Study Calendars (4-Week and 8-Week Plans)

Test-Day Game Plan

Part 1 · Mathematics

How Grade 8 Math Is Built (The Four Strands)

Grade 8 Mathematics Reference Sheet

Strand 1 — Numerical Representations and Relationships

Strand 2 — Computations and Algebraic Relationships

Strand 3 — Geometry and Measurement

Strand 4 — Data Analysis and Personal Financial Literacy

Process Standards in Action · Warm-Up Skill Drills

Math Practice Tests 1–4

Part 2 · Reading Language Arts

How Grade 8 RLA Is Built (Reading, Writing, and Written Responses)

Genre Guide · Reading Strategy Lessons · Revising and Editing Refresher

Short Constructed Response (SCR) Mastery

Extended Constructed Response (ECR) Mastery

RLA Practice Tests 1–4

Part 3 · Answer Keys & Explanations

Quick Answer Keys (All 8 Tests)

Mathematics — Answer Explanations (Tests 1–4)

Reading Language Arts — Answer Explanations (Tests 1–4)

SCR Scored Samples · ECR Scored Samples

Part 4 · Diagnose & Grow

Score-Tracking Sheets · Strand Diagnostic Charts

A Guide for Parents and Teachers

TEKS Coverage Index · Final Notes

How this book is organized: First you *learn* each tested skill, then you *practice* it in short drills, then you *simulate* the real test with eight full-length practice tests, and finally you *diagnose* your results to see exactly what to study next.

Welcome to Your STAAR Grade 8 Study Guide

Dear Student,

The STAAR Grade 8 tests in Reading Language Arts and Mathematics can feel like a lot — two subjects, many skills, a timed online screen, and even written essays. This book exists to make all of that feel familiar long before test day.

Here is the promise of this book: **everything inside is on the test, and nothing on the test is left out.** Every lesson, every practice question, and every writing prompt is tied directly to the Texas Essential Knowledge and Skills (TEKS) that STAAR measures at Grade 8. You will not waste a single minute on material that will not help you.

You will move through four stages:

1. **Learn** — short, clear lessons that teach every tested skill.
2. **Practice** — quick drills so each skill sticks.
3. **Simulate** — eight full-length practice tests that look and feel like the real thing.
4. **Diagnose** — answer explanations and charts that show you exactly what to review next.

Work at a steady pace, check every answer explanation (even for questions you got right), and use the diagnostic charts to spend your study time where it matters most. Confidence on test day comes from practice, and this book gives you plenty.

You can do this. Let's get started.

— *Adrian Ross*

A note for parents and teachers: A full guide for supporting a student with this book — including how to read the diagnostic charts and how to coach the written responses — begins on the "A Guide for Parents and Teachers" page near the back.

How to Use This Book

This book works for three kinds of readers. Find the path that fits you.

Path A — The Student Studying on Your Own

1. **Start with "Getting Started."** Read how the test works, how it is scored, and how the online question types look on paper. About 30 minutes — and it saves you from surprises.
2. **Pick a study calendar.** Use the 4-Week Sprint if the test is close, or the 8-Week Plan if you have more time.
3. **Learn, then practice.** Read the skill lessons and do the warm-up drills before a full test.
4. **Take one full test at a time, under test-like conditions** — quiet room, no phone, timed.
5. **Review every explanation,** including for questions you answered correctly.
6. **Fill in your diagnostic chart** after each test, then study your weakest strand next.

Path B — The Parent or Tutor Helping a Student

- Use the **"A Guide for Parents and Teachers"** section at the back first.
- Sit with the student for the **first** practice test to model pacing, then let them work more independently.
- Focus praise on **effort and strategy**, not just the score. The tracking sheets make growth visible.

Path C — The Classroom Teacher

- Lessons and drills map one-to-one to the **TEKS**; the **TEKS Coverage Index** lists where every standard is taught and practiced.
- Each full-length test is blueprint-matched — usable as a benchmark or mock administration.
- Explanations include the TEKS code and *why each wrong choice is wrong*, useful for reteaching.

The Symbols You Will See

Symbol	Meaning
★	**Readiness standard** — tested heavily every year. Master these first.
○	**Supporting standard** — tested less often, but still fair game.

Key Idea	The one thing to remember from a lesson.
Watch Out	A common Grade 8 mistake to avoid.
Try It	A quick practice item to check yourself.
Strategy	A test-taking tip tied to the question in front of you.

Tip: Keep a pencil, scratch paper, and the Grade 8 Mathematics Reference Sheet nearby while you work. On the real test these tools are available to you — practice using them now.

Inside the STAAR Grade 8 Test

The Final STAAR Year

STAAR — the State of Texas Assessments of Academic Readiness — measures how well students have learned the **Texas Essential Knowledge and Skills (TEKS)** for their grade. Under Texas House Bill 8 (2025), **spring 2027 is the last STAAR administration** for grades 3–8. A new assessment called the Student Success Tool is scheduled to replace it in 2027–2028. This book prepares you fully for that final STAAR year.

A Computer-Based Test

STAAR is given **online**, on a computer. The real test includes question types beyond simple multiple choice — you might type an answer, choose from a drop-down menu, drag items into place, or build an equation. A paper book can't make you click and drag, so this book does the next best thing: it **shows every online question type on paper** and teaches you exactly how to answer it. The *thinking* is identical; only the clicking is different.

What Grade 8 Students Take

At Grade 8, students are assessed in **Reading Language Arts, Mathematics, Science, and Social Studies.** This book focuses on the two taken by every Grade 8 student every year: **Reading Language Arts and Mathematics.**

The Mathematics Test at a Glance

Feature	Grade 8 Mathematics
Total questions	**40**
Total points	**48** (32 one-point + 8 two-point questions)
Reporting categories (strands)	4 — Numerical; Computations & Algebraic; Geometry & Measurement; Data & Financial Literacy
Question types	Multiple choice, multiselect, inline choice, text entry/griddable, drag-and-drop, equation editor, graphing
Tools provided	**Calculator** and the **Grade 8 Mathematics Reference Sheet**

The Reading Language Arts Test at a Glance

Feature	Grade 8 Reading Language Arts
Total questions	**~45**
Total points	**56**
Reading section	~28 questions / ~30 points — includes **2 Short Constructed Responses** (2 pts each)
Writing section (Revising & Editing)	~17 questions / ~26 points — includes **1 Extended Constructed Response** (10 pts)
Passages	Literary and informational; single passages and a paired set
Tools provided	Online **dictionary/thesaurus**

How Much Time?

STAAR for grades 3–8 is given with a generous time window of **up to four hours**. It is **not a speed test** — most students finish comfortably. Still, practicing with a timer builds a steady, calm pace.

> **Watch Out:** Written responses carry real points — up to **14 of the 56 RLA points** come from the SCRs and ECR. Never leave them blank. A partial, organized response almost always earns more than nothing.

How STAAR Is Scored

From Raw Points to a Performance Level

Each question earns **raw points** (1 or 2 for most; the Extended Constructed Response is worth 10). Your total raw points convert to a **scale score**, which places you in one of four **performance levels**:

Performance Level	What It Means
Masters Grade Level	Strong command of the grade's content; ready for the next grade with little support.
Meets Grade Level	Solid understanding; likely to succeed next grade with some support.
Approaches Grade Level	Some understanding; likely needs targeted support next grade.
Did Not Meet Grade Level	Not enough understanding yet; needs significant support.

The goal for most students is **Meets Grade Level** or higher — and this book is built to get you there.

How Written Responses Are Scored

- **Short Constructed Response (SCR)** — a few sentences answering a specific question, scored **0 to 2 points**. Earn full credit by making a clear point and backing it with correct **evidence from the text**.
- **Extended Constructed Response (ECR)** — a full multi-paragraph essay, scored **0 to 10 points**. The rubric rewards a clear central idea or claim, organized paragraphs, specific supporting evidence, and correct language and conventions.

You will learn to earn these points step by step in the **SCR Mastery** and **ECR Mastery** sections, which include real-style prompts and sample responses scored at high, middle, and low levels.

Tracking Your Own Scores

After each practice test, use the **Score-Tracking Sheets** and **Strand Diagnostic Charts** at the back. They turn raw points into a performance estimate and show you **which strand or skill to study next.** Watching your scores climb from Test 1 to Test 4 is the clearest sign your work is paying off.

Item-Type Field Guide

How Online Questions Look on Paper

STAAR is taken on a computer, so some questions ask you to do more than bubble a letter. This guide shows **every question type you may meet**, how we present it on paper in this book, and a quick example. The skill tested is always a Grade 8 TEKS skill — only the way you record your answer changes.

> **Key Idea:** On screen you *click, type, or drag.* On paper you *circle, write, or draw an arrow.* The thinking is exactly the same.

1. Multiple Choice

Online: Click one choice (A–D). **On paper:** Circle the letter of the one best answer.

Example (Math). Which number is the greatest? A. 0.6 B. ⅗ C. 0.58 D. ½ *(Answer: A)*

2. Multiselect

Online: Check every correct box. **On paper:** Circle **all** correct letters; the question says how many.

Example (Math). Select the **two** numbers that are irrational. A. √49 B. √10 C. π D. 0.25 *(Answers: B and C)*

3. Inline Choice (Drop-Down)

Online: Click a drop-down inside the sentence. **On paper:** Each drop-down is a box of choices; circle the correct one.

Example (Revising & Editing). The science club meets after school, and the members [is / **are** / was] planning a fundraiser. *(Answer: are)*

4. Text Entry / Griddable

Online: Type a number or short answer; for numbers you may fill a grid. **On paper:** Write in the box, then bubble the grid when provided.

Example (Math). A line passes through (0, 3) with slope 2. What is y when $x = 4$? [ ] *(Answer: 11)*

5. Drag-and-Drop

Online: Drag words/numbers from a bank into blanks or an order. **On paper:** A bank is printed; write each item on the correct line or draw an arrow.

Example (Math). Order from **least to greatest.** Bank: 0.4, ⅓, 0.37, ⅖ Least __ __ __ __ Greatest *(Answer: ⅓, 0.37, 0.4, ⅖)*

6. Equation Editor

Online: Build an expression/equation with an on-screen keypad. **On paper:** Write it neatly on the line.

Example (Math). Write an equation in form $y = mx + b$ for slope 3, y-intercept −5. _____ *(Answer: $y = 3x - 5$)*

7. Graphing

Online: Plot points, lines, or bars on a grid. **On paper:** Use the printed coordinate grid and a pencil.

Example (Math). On the grid provided, plot (−2, 4) and draw the line $y = x + 1$.

8. Hot Text

Online: Click a sentence or phrase in the passage. **On paper:** Underline, or write the number of, the sentence that answers the question.

Example (Reading). Underline the sentence that **best** supports the idea that the narrator felt nervous.

9. Written Responses (SCR and ECR)

Online: Type in a text box. **On paper:** Write in the lined space provided.

- **Short Constructed Response (SCR)** — a few sentences with text evidence (2 points).
- **Extended Constructed Response (ECR)** — a full multi-paragraph essay (10 points).

You will practice these in depth in the **SCR Mastery** and **ECR Mastery** sections.

> **Strategy:** When a question says "Select TWO" or "least to greatest," underline those words before you answer. Many points are lost not from wrong math or reading, but from missing the directions.

Your Study Calendars

Pick the plan that fits the time you have. Each uses the same four stages — **Learn, Practice, Simulate, Diagnose** — and spreads the eight full-length tests so you never cram. Check off each day as you go.

> **Key Idea:** Short, steady sessions beat one long rush. Aim for 30–45 focused minutes per study day.

The 4-Week Sprint (test is coming soon)

Week	Focus	Do This
1	Math — Strands 1 & 2	Read lessons; warm-up drills; take **Math Test 1**; review every explanation
2	Math — Strands 3 & 4	Lessons; drills; take **Math Tests 2 & 3**; fill diagnostic charts; redo weak skills
3	RLA — Reading + SCR	Genre guide & reading lessons; **SCR Mastery**; take **RLA Tests 1 & 2**
4	RLA — Writing + ECR, then finish	Revising/editing refresher; **ECR Mastery**; take **Math Test 4**, **RLA Tests 3 & 4**; final review

The 8-Week Plan (more time, deeper mastery)

Week	Focus	Do This
1	Math Strand 1 — Numerical	Lesson + drills; begin a daily routine
2	Math Strand 2 — Computations & Algebraic	Lesson + drills; **Math Test 1** + review
3	Math Strand 3 — Geometry & Measurement	Lesson + drills; **Math Test 2** + diagnostic chart
4	Math Strand 4 — Data & Financial Literacy	Lesson + drills; **Math Test 3**; reteach weak skills
5	RLA Reading — genres & strategies	Genre guide + reading lessons; hot-text practice

6	RLA Short Constructed Response	**SCR Mastery**; **RLA Test 1** + review
7	RLA Revising & Editing	Conventions refresher; **RLA Test 2**; **Math Test 4**
8	RLA Extended Constructed Response + final push	**ECR Mastery**; **RLA Tests 3 & 4**; final diagnostic review

Watch Out: Do not skip the review step. The biggest score gains come from understanding **why** you missed a question, then practicing that exact skill again.

Test-Day Game Plan

You have practiced the skills and the question types. Test day is simply one more practice test — this time for real. Follow this plan to stay calm and finish strong.

The Night Before

- Pack what you need and go to bed on time. Rest helps your brain more than last-minute cramming.
- Do a light review of your **diagnostic charts** only — no new material.

The Morning Of

- Eat a good breakfast. Arrive early so you feel settled, not rushed.
- Take a few slow breaths before you begin. You are ready.

During the Test — Your Pacing Plan

1. **Read the directions of each question carefully.** Watch for *select two*, *least to greatest*, and *best*.
2. **Answer the questions you know first.** Flag harder ones and return — don't let one question eat your time.
3. **Use your tools.** On Math, use the **calculator** and **reference sheet** and show work on scratch paper. On Reading, use the online **dictionary** when a word blocks understanding.
4. **Eliminate wrong answers.** Crossing out two choices doubles your odds on a tricky question.
5. **Never leave a question blank.** There is no penalty for guessing. Make your best choice and flag it to revisit.

Budgeting Time for Written Responses (RLA)

- Keep **SCR** answers short and direct — make your point, give **text evidence**, done.
- Save time for the **ECR** essay (10 points). A quick plan — thesis, two or three supporting points with evidence, a conclusion — keeps you organized. A partial, organized essay still earns points; a blank one earns none.

Before You Submit

- Return to every flagged question; make sure each has an answer.

- Check that multiselect questions have the **right number** of choices marked.
- Reread written responses once for clear sentences, correct spelling, and punctuation.

Key Idea: Finish every question with *some* answer, give the written responses real effort, and use your full time. Steady and complete beats fast and blank.

You've got this. Now turn the page and start building your skills.
